COMMENTS:

A form 4 abatement mitigation plan for this well was approved on 12/17/2019. The abatement system was opened on 08/15/2019. The most recent approval for the continued use of this mitigation was on 04/22/2025. A gas sample was collected on 01/12/2026, and the composition was 0.104 mol % ethane, 1.885 mol % hydrogen, 4.252 mol % methane, and 91.598 mol % nitrogen. Nitrogen is used to pull fluid from the bradenhead. Because the cement passes the well's producing zone, some residual methane is expected. No flow rate data has been collected in this form 4 period. On 01/30/2026 a form 17 was completed with a starting pressure of 22 psi and an ending pressure of 0 psi. The well was shut in for over seven days prior to the form 17 being performed. Gas was present at the start of the test but was not continuous. This well is in compliance with Order 1-232 and will be returned to annual testing.
