2 CA# 210940

Corrective Action: Mechanical Conditions: Ensure that all production facilities, valves, pipes, fittings, and vessels will be securely fastened or sealed, inspected at regular intervals, and maintained in good mechanical condition to comply with 608.e

Date: 02/16/2026

Response: CA COMPLETED

Date of Completion: 02/12/2026

Operator Comment: The relief valve had a minor leak, which allowed a small amount of produced water to collect in the vent piping. The vent piping has a weep hole to allow water from rain and snowmelt to drain so that it won't freeze and crack the pipe. The produced water that collected in the vent piping found its way to the weep hole and dripped on the ground. All flanges, valves and fittings were re-torqued, and the minor leak has been resolved. All KM wellheads and flowline piping assemblies are on a routine inspection schedule. See attached photo log and figure.
