

TABLE 2  
 915-1 Inorganic Analytes - Soil Samples  
 T055 Preliminary Sampling 4/29

lab sdg	lab sdg
E5D0865	E5D0865

**Notes:**  
 Bold and Pink highlighted soil analytical values indicate an exceedance of the referenced soil screening level (SSL). Bold and Purple highlighted soil analytical values indicate an exceedance of the Site-Specific Background Concentration (SSBC).  
 Results compared to the approved SSBC from *Derivation of Site-specific Soil Inorganic Background Concentrations* (December 11, 2025). Results must exceed the SSBC to be flagged as an exceedance.  
 Inorganic SSLs are based on target cancer risk (TR) of 10<sup>-6</sup> (OR 1E-06) and target hazard quotient (THQ) of 1.0.  
 Pace National-Laboratory non-detections reported by the laboratory prior to 5/9/2025 are reported as less than ("<") the laboratory method detection limit. Pace National-Laboratory non-detections reported by the laboratory beginning on 5/9/2025 and Enthalpy - Laboratory non-detections are reported as less than ("<") the limit of quantitation.  
 Multiple columns are presented for individual analytes when laboratories perform and/or report multiple analyses (such as original analyses, reanalyses, and dilution analyses). All available data are shown for events with more than one reportable result, with each column representing a distinct analysis.  
 Italic values indicate that the laboratory-reported method detection limit and/or quantitation limit associated with the non-detected result is higher than the threshold concentration.  
 Sampling and analysis is being performed in accordance with the approved ESAP.  
 NA represents not analyzed.  
 (DUP) indicates Field Duplicate Samples.  
 ECMC = Colorado Energy and Carbon Management Commission

***No parameters were detected at concentrations exceeding either approved Site-Specific Background Concentrations or ECMC Table 915-1 Residential SSLs.***

**Data Qualifiers**

U: The analyte was analyzed for, but was not detected above the level of the adjusted detection limit or quantitation limit, as appropriate, or was observed in a blank at a similar level.  
 R: The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.  
 J: The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.  
 J+: The result is an estimated quantity, but the result may be biased high.  
 J-: The result is an estimated quantity, but the result may be biased low.  
 UJ: The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

**Units:**

mg/kg = Milligrams per kilogram
