Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by ECOM is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

**INITIAL ACTION SUMMARY**

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Injection lateral line failure, releasing produced water to land and ultimately reached an unnamed dry surface water of the state and one of our siphon locations. Operations isolated block valves to stop the leak. Vac truck picked up available liquids, clean up going to continue as soon as snow removal is completed-large snowstorm overnight 2/5-2/6 has affected water wash process. Type of pipe, size, and release point depth below grade unknown as of this time due to adverse weather conditions. Will provide further details in the supplemental report. A soil sample location map and preliminary analytical results are included as an attachment.

**PROPOSED SAMPLING PLAN**

**Proposed Soil Sampling**

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Preliminary soil samples were collected on May 7, 2019 from the spill path. A total of five (5) grab samples analyzed for TPH (GRO/DRO), BTEX, SAR, EC and pH were collected at a depths from 0 to 6 inches below ground surface (ft-bgs). Results show elevated SAR EC, and pH levels within the impacted area.  
 Subsequent soil samples analyzed for SAR at SS1-SS4 sample locations, EC at SS1 sample location and pH at SS2 and SS3 sample locations will be collected during the summer of 2021 to monitor natural attenuation.  
 SAR, EC and pH impacted soils will be treated in-situ by Natural Attenuation. After initial water wash seasonal precipitation events will be utilized.

If surface water is impacted, other agency notification may be required.

## OTHER INVESTIGATION INFORMATION

Were impacts to adjacent property or offsite impacts identified?

Were background samples collected as part of this site investigation?

One local background sample was collected from an undisturbed area adjacent to the spill. Results may be found in the attached analytical results. Three historical background samples associated with nearby past releases were also selected. When selecting the historical backgrounds for comparison, priority was given to those samples closest to the spill origin. Preference was also given to those from a similar land usage and vegetative cover. Results for the referenced historical background samples may be found under "Related Forms" and the attachments for this update.

Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards) \_\_\_\_\_ Volume of liquid waste (barrels) \_\_\_\_\_

Is further site investigation required?

## REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

### SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

No soil is intended for removal.

### REMEDATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

SAR, EC, HSB and pH impacted soils will be treated in-situ by Natural Attenuation. After initial water wash seasonal precipitation events will be utilized. Subsequent soil samples will be collected to monitor natural attenuation.

## Adequacy of Operator's General Liability Insurance and Financial Assurance

Describe the adequacy of the Operator's general liability insurance and Financial Assurance to fully address the anticipated costs of Remediation, including the estimated remaining cost for this project (below).  
If this information has been provided on a Form 27 within the last 12 months, provide the Document Number of that form.

The policies described below afford industry standard terms and conditions for said policy types, noting that Scout's pollution coverage is broadened pollution legal liability which does not dictate cover based on gradual pollution or sudden or accidental pollution losses. The coverage is intended to respond if a loss occurs during the policy period as respects to a particular property (owned, leased, operated). Note that all layers of excess coverage shown act in excess of the general liability policy, and note that only the Lead \$10M Umbrella Policy is afforded in excess of pollution coverage.

Operator anticipates the remaining cost for this project to be: \$ 2000 \_\_\_\_\_

## WASTE DISPOSAL INFORMATION

Was E&P waste generated as part of this remediation? \_\_\_\_\_

# REMEDIATION COMPLETION REPORT

## REMEDIATION COMPLETION SUMMARY

Is this a Final Closure Request for this Remediation Project? No \_\_\_\_\_

If YES:

- Compliant with Rule 913.h.(1).
- Compliant with Rule 913.h.(2).
- Compliant with Rule 913.h.(3).

Do all soils meet Table 915-1 standards? \_\_\_\_\_

Does the previous reply indicate consideration of background concentrations? \_\_\_\_\_

Does Groundwater meet Table 915-1 standards? \_\_\_\_\_

Is additional groundwater monitoring to be conducted? \_\_\_\_\_

Operator shall comply with the ECMC 1000-Series Reclamation Requirements for all impacted and disturbed areas.

## RECLAMATION PLAN

### RECLAMATION PLANNING

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing.

Site will be reclaimed and seeded once repairs are completed.

Is the described reclamation complete? \_\_\_\_\_

Does the reclamation described herein constitute interim or final reclamation of the Oil and Gas Location?

**OPERATOR COMMENT**

This form serves as an 2025 annual update to sampling activities at REM #18536.

Subsequent samples were collected on July 10, 2025. Five locations (SS1, SS3, SS4, SS5 and SS8) were sampled and analyzed for a shortened list of Table 915-1 parameters based on past overages. Results indicate no continued exceedances to Table 915-1 standards above local background levels along the spill path.

On December 11, 2025 a sample (LEV34XLAT-POR) was collected from the original point of release at a depth of four (4) feet bgs and analyzed for full Table 915-1 parameters. Results show exceedances to Table 915-1 standards above local background levels of SAR and EC at this sampling location.

Please see the attached documents for all sample locations, depths and analytical results. Results for the referenced historical background samples may be found under "Related Forms" and the attachments for this update.

Natural attenuation will continue to be monitored at this remediation at the POR sampling location. Scout requests approval of a reduced analyte list on all future samples consisting of SAR and EC only.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
