Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A release of approximately 2.5 bbls of oil within containment was identified at the Cannon 15N,16N,16C-3HZ production facility due to a pressure sensor valve failure on the vapor recovery tower (VRT) and vapor recovery unit (VRU). This release became reportable following the removal of more than 10 cubic yards of potentially impacted soil. This release has been controlled and is no longer active. Assessment activities are ongoing. The assessment details will be summarized in a supplemental Form 27 report (Remediation No. 44143; Form 27 Initial Document No. 404479375).
