General Comment:

[Flowline Integrity Spill Response Inspection & Tank Integrity Inspection Form 19 Spill/Release doc 404560354](#)

"A gas leak was identified via FLIR camera during an LDAR inspection. Gas was surfacing at the sales line riser behind the separators. All lines were immediately deenergized and a hydrovac was dispatched. The sales line was daylighted and the failure identified as a pinhole in the line. Soils around the point of release were removed. No visual evidence of soil staining or sheen was seen around the point of release. No threat to surface waters was identified."

Flowlines behind meter shed and separators have been potholed.

Top of one of the production tanks is rusty.

Cap is missing from top of 1000 gallon methanol tank.

Replace cap.
