Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

During routine corrosion testing on 3/5/2026, auditory sounds indicating the possibility of a gas leak were discovered at the pipeline pig launcher. After determining that there was an active release, the pipeline was isolated, de-pressurized and is inactive pending further investigation. The area around the pipeline will have to be excavated to determine the source of the suspected gas leak and investigate any impacts to surrounding soils. The root cause of this release is still under investigation. Corrective actions are being determined and will be updated as necessary in a Supplemental Form 19.

There are no groundwater wells within a quarter mile of the release. Depth to groundwater is unknown at this time. If groundwater is encountered at this location, an additional notification will be made to ECMC. No High Priority Habitats or wetlands have been identified within a quarter mile of the release. The closest surface water is the Last Chance Ditch located 2000' to the north.

No other potential receptors have been identified within a quarter mile of the location at this time.
See attached Figure 1 for site location.
