Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by ECMC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Pursuant to Rule 911 a site investigation was conducted pertaining to the BRANCH 1-3 wellhead cut and cap. Additional assessment will be completed regarding the flowline removal. Approximately 780' of flowline will be removed. The ECMC will be updated in a supplemental Form 27 if a portion of the flowline is abandoned-in-place due to field constraints. The wellhead was cut and capped per COGCC rules. The Flowline Pre-Abandonment Notice Document number is included under Related Forms.

A grab confirmation soil sample was collected at the wellhead excavation. The soil sample was analyzed by a certified laboratory for all ECMC Table 915-1 compounds with the exception of metals. Laboratory analysis indicated that results for VOCs, SVOCs and SSR did not exceed the ECMC regulatory limits at the wellhead location.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Soil samples will be collected during flowline removal at any points of material change and/or hammer unions, directional changes, as well as at the bell holes on either side of a waterway, where applicable. These soil samples will be analyzed for all soil compounds per ECMC Table 915-1. In addition, one sample sample will be collected near the former wellhead for analysis of ECMC Table 915-1 metals. Background samples will also be collected from similar lithologic materials for analysis of ECMC Table 915-1 compounds.

Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

If groundwater is encountered during the site investigation a grab groundwater will be collected and analyzed for all groundwater compounds per ECMC Table 915-1.

Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

[Empty text box for surface water sampling details]

Additional Investigative Actions

Additional alternative investigative actions described in attached Site Investigation Plan (summary):

Visual inspection of the flowline areas will occur during abandonment activities. Field personnel will field screen all disturbed areas using visual and olfactory senses to determine if laboratory confirmation sampling is required. The ECMC Flowline Closure Checklist will be utilized and filled out during the abandonment process. A photolog will be submitted on the Subsequent Form 27.

OTHER INVESTIGATION INFORMATION

Were impacts to adjacent property or offsite impacts identified?

Were background samples collected as part of this site investigation?

Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards) Volume of liquid waste (barrels)

Is further site investigation required?

Further site investigation will be required to assess soil conditions during flowline removal or abandonment, as needed. These soil samples will be analyzed for all soil compounds per ECMC Table 915-1. In addition, one soil sample sample will be collected near the former wellhead for analysis of ECMC Table 915-1 metals. Background samples will also be collected from similar lithologic materials for analysis of ECMC Table 915-1 compounds. If groundwater is encountered during the site investigation a grab groundwater will be collected and analyzed for all groundwater compounds per ECMC Table 915-1.

OPERATOR COMMENT

This Supplemental Form 27 represents the 2Q2022 confirmation soil sample results of the wellhead excavation activities conducted at the Branch 1-3 wellhead, as documented in the denied supplemental form 27 Document #404031875. The confirmation soil sample was collected at the bottom of the excavation on April 1, 2022. All table 915-1 standards for VOCs, SVOCs and SSR were met. The sample was not analyzed for ECMC table 915-1 metals. Based upon these results, further supplemental site investigation activities will be conducted to delineate ECMC metals at the former Branch 1-3 wellhead location.

In addition, flowline sampling will be conducted during Q2 2025. The findings from the sampling event, as well as any additional actions required, will be provided in a subsequent quarterly Supplemental Form 27 submittals.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
