<p>Numerous historical flowlines and large concrete slab foundations were observed exposed in a drainage approximately 420' S-SE of the Badger Creek 22-32B well @ 39.863691, -103.747273. The flowlines all appear to be inactive (OOS) and historically abandoned. Corrosion holes were observed on the carbon steel flowline pipe as well as historic clamp repairs. ECMC Integrity Inspector contacted Investment Equipment LLC about these flowlines/ oil and gas debris via phone call on 4/3/2026. Per communication with the operator, the pipe/ debris is associated with historic operators/ area PA wells that are no longer active. More information will be needed to determine associated oil &amp; gas facilities/ responsible party.</p>	maclarej	04/03/2026
