COMMENTS:

TEP Rocky Mountain LLC (TEP) is submitting this Form 4 to satisfy a Condition of Approval (COA) attached to ECMC Document #404474371. The COA states "No later than 4/9/26, conduct a bradenhead test, submit a Form 17, and submit a Form 4 Sundry that summarizes current well condition. The well should be shut in for seven days to monitor and collect data to characterize build up pressures prior to conducting the bradenhead test. The sundry should include details of the future plans, sample analysis interpretation, bradenhead test description, and the flow rate information and pressure data."

An annual bradenhead test, which included a seven-day shut in of the bradenhead connection to the sales line, was performed on 04/14/2026, and the Form 17 reporting the results of this test can be referenced under ECMC Document #404622869. TEP self-identified the missed COA deadline of 4/9/2026 that occurred due to COA deadline timing of approximately two months from ECMC assignment. Due to planned longer lead times from the ECMC for future related COA deadlines, TEP does not anticipate this to be an issue going forward.

Since installation, the bradenhead connection to the sales line is effectively managing the bradenhead pressure and maintaining a consistent bradenhead pressure below the ECMC calculated threshold pressure of 77 psi. TEP has included the historical monthly pressure data as an attachment.

TEP has completed an additional diagnostic evaluation of the well, and the following lines of evidence continue to demonstrate that the ARC0-TOSCO #W-14-34 has both casing integrity and wellbore isolation:

- The recent bradenhead test results indicate a successful test, and the test results confirm production casing integrity.
- There was a 42-psi pressure differential between the surface casing and the production casing prior to starting the bradenhead test.
- The bradenhead pressure decreased to 0 psi within five minutes with a de minimis volume of gas through a half-inch valve.
- Analytical results taken 03/05/2025 indicated a carbon dioxide concentration of 1.4629% in the production gas sample versus a concentration of 0.0203% in the bradenhead sample. The analytical results of the recent bradenhead and production gas samples have been submitted to the ECMC via a Form 43 (#404132499).

TEP will continue to utilize the ARC0-TOSCO #W-14-34 bradenhead connection to the sales line to effectively manage the bradenhead pressure below the BMA threshold pressure as detailed in the previously approved Pressure Management Plan. TEP will also continue to monitor the bradenhead pressures as part of our monthly monitoring and annual testing programs and will report any future bradenhead threshold pressure exceedances as required by Rule.
