COMMENTS:

A form 4 abatement mitigation plan for this well was approved on 10/16/2025. The abatement system was opened on 10/01/2025. The most recent approval for the use of this mitigation was on 10/16/2025. A gas sample was collected on 03/12/2026, and the composition was 4.835 mol % ethane, 0.005 mol % hydrogen, 37.141 mol % methane, and 41.912 mol % nitrogen. Nitrogen is used to pull fluid from the bradenhead. Because the cement passes the well's producing zone, some residual methane is expected. This gas samples indicates Bradenhead gas to be thermogenic gas with somewhat similar composition as the production sample. No flow rate data has been collected in this form 4 period. On 03/23/2026 a form 17 was completed with a starting pressure of 135 psi and an ending pressure of 0 psi. The well was shut in for over seven days prior to the form 17 being performed. Gas was present at the start of the test but was not continuous. Fluid was present for the entire test. We will continue to use this mitigation strategy for the next 12 months to maintain bradenhead pressures below the 50-psi threshold. At the end of the period, Chevron will perform another form 17 test, and a follow-up Form-4 will be submitted to the ECMC.
