COMMENTS:

A form 4 abatement mitigation plan for this well was approved on 09/08/2023. The abatement system was opened on 08/29/2023. The most recent approval for the continued use of this mitigation was on 05/14/2025. A gas sample was collected on 05/12/2025, and the composition was 10.815 mol % ethane, 0.076 mol % hydrogen, 74.494 mol % methane, and 4.763 mol % nitrogen. This gas samples indicates Bradenhead gas to be thermogenic gas with somewhat similar composition as the production sample. No flow rate data has been collected in this form 4 period. On 03/24/2026 a form 17 was completed with a starting pressure of 12 psi and an ending pressure of 0 psi. The well was shut in for over seven days prior to the form 17 being performed. Gas was present at the start of the test but was not continuous. We will continue to use this mitigation strategy for the next 12 months to maintain bradenhead pressures below the 50-psi threshold. Pressure did not exceed the bradenhead action pressure threshold while the system was operating. At the end of the period, Chevron will perform another form 17 test, and a follow-up Form-4 will be submitted to the ECMC.
