Bradenhead Pressure Action Threshold 1082 psig

This threshold is calculated per Rule 308A.b.(2)G. If this well is located in a bradenhead test area (see Rule 207.b) per an Order of the Commission, it may be subject to a different threshold.

Does the casing centralization comply with Rule 317.g? Yes

If "NO", provide details below.

NIOBRARA	8,440		NO	NO	

Operator Comments:

The TPZ footages are estimates calculated through Directional Plotting Software—from where the production string (5 1/2" casing) crosses the 460' setback hardline. The actual footages will be submitted with the Form 5A.  
Alternative Logging Program- No open hole resistivity log with gamma ray was run on this well per rule 317.p. A Resistivity log was run on State La Plata 5-65 13-14-15-16 1AH (005-07589).

12 of the originally permitted 17 wells were staked with the incorrect name plates. As a result, the 12 wells were drilled from two slots north of their originally permitted SHL. The resulting well shift for the drilled wells remains within the originally proposed well row approved in the Form 2A. The updated well location plat is attached to this form 5.

I hereby certify all statements made in this form are, to the best of my knowledge, true, correct, and complete.
