COMMENTS:

A form 4 abatement mitigation plan for this well was approved on 07/09/2019. The abatement system was opened on 10/07/2019. The most recent approval for the continued use of this mitigation was on 07/28/2025. No samples have been collected in this form 4 period. No flow rate data has been collected in this form 4 period. On 04/27/2026 a form 17 was completed with a starting pressure of 23 psi and an ending pressure of 0 psi. The well was shut in for over seven days prior to the form 17 being performed. Gas was present at the start of the test but was not continuous. Fluid was present for the entire test. We will continue to use this mitigation strategy for the next 12 months to maintain bradenhead pressures below the 50-psi threshold. Pressure did not exceed the bradenhead action pressure threshold while the system was operating. At the end of the period, Chevron will perform another form 17 test, and a follow-up Form-4 will be submitted to the ECMC.
