INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

No work has been completed since previous SF27 document number 404534701 was submitted on 2/5/26, which has not yet been reviewed by ECMC. This form is being submitted to satisfy the Rule 913.e quarterly requirement. See attached explanation for no work completed.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Further excavation and confirmation sampling is needed at the wellhead excavation where 2/27/24 samples WH-B02@9', WH-N02@8', WH-S02@8', WH-E02@8', WH-W02@8', and WH-S02@4' exceeded Table 915-1 Residential Soil Screening Level limits for TPH (C6-C36), EC, SAR, and Arsenic. Wellhead excavation confirmation soil samples will be submitted to Origins for full Table 915-1 per approved SF27 document number 404076058.

Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

If groundwater is encountered during site assessment, a grab groundwater sample will be collected and analyzed for ECMC Table 915-1 Organic Compounds in Groundwater and Groundwater Inorganic Parameters.

Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

Additional alternative investigative actions described in attached Site Investigation Plan (summary):

Visual inspection of the abandoned-in-place flowline will occur during planned additional assessment activities. Field staff will use a PID to field screen a minimum of every 250' adjacent to the flowline to determine if laboratory analysis is required. Grab soil samples will be collected at depth for lab analysis at change(s) in direction of the flowline as well as the end of the flowline at the separator riser. If impacts are not apparent from visual, olfactory, and PID screening, the vertex and terminus flowline soil samples will be analyzed by a certified laboratory for full ECMC Table 915-1. If there are any apparent potential impacts, grab soil samples from those locations will be collected and analyzed for full ECMC Table 915-1. The ECMC Flowline Closure Checklists will be completed during the assessment. A photolog will be submitted on a subsequent SF27.
