

TABLE 3
Additional Inorganic Analytes - Residential Well Groundwater Samples
T042-1 Well Sampling 5/21

No Additional Inorganic Analytes were reported for these samples.

Notes:

Sampling and reporting were performed in compliance with Colorado Energy and Carbon Management Commission (ECMC) Rule 615, as published by the State of Colorado, and in accordance to the WWSAP.

Bold and Pink highlighted groundwater analytical values indicate an exceedance of the referenced cleanup concentrations in Regulation No. 11 - Colorado Primary Drinking Water Regulation 5 CCR 1002-11 as published by the Department of Public Health and Environment Water Quality Control Commission.

Non-detections are reported as less than (" $<$ ") the limit of quantitation. Non-detected Radium results depict activity of the result.

(RL) indicates data was reported to the method detection limit (MDL) and J/estimation of result was applied due to result being detected between the MDL and LOQ.

Italic values indicate that the laboratory-reported method detection limit and/or quantitation limit associated with the non-detected result is higher than the threshold concentration.

Multiple columns are presented for individual analytes when laboratories perform and/or report multiple analyses (such as original analyses, reanalyses, and dilution analyses). All available data are shown for events with more than one reportable result, with each column representing a distinct analysis.

NE = Not Established

(DUP) indicates Field Duplicate Samples.

NA = Not Analyzed/Reported for Sample.

ECMC = Colorado Energy and Carbon Management Commission

mg/L = Micrograms per Liter

SU = Standard Units

pCi/L = picocuries per Liter

Data Qualifiers

U: The analyte was analyzed for, but was not detected above the level of the adjusted detection limit or quantitation limit, as appropriate, or was observed in a blank at a similar level.

R: The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

J: The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

J+: The result is an estimated quantity, but the result may be biased high.

J-: The result is an estimated quantity, but the result may be biased low.

UJ: The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
