Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by ECMC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27.

This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

Adequacy of Operator's General Liability Insurance and Financial Assurance

Describe the adequacy of the Operator's general liability insurance and Financial Assurance to fully address the anticipated costs of Remediation, including the estimated remaining cost for this project (below).

If this information has been provided on a Form 27 within the last 12 months, provide the Document Number of that form.

The policies described below afford industry standard terms and conditions for said policy types, noting that Scout's pollution coverage is broadened pollution legal liability which does not dictate cover based on gradual pollution or sudden or accidental pollution losses. The coverage is intended to respond if a loss occurs during the policy period as respects to a particular property (owned, leased, operated). Note that all layers of excess coverage shown act in excess of the general liability policy, and note that only the Lead \$10M Umbrella Policy is afforded in excess of pollution coverage.

Operator anticipates the remaining cost for this project to be: \$ 0

OPERATOR COMMENT

This form is being submitted as an annual update to sampling activities for this remediation project.

On December 1, 2025 a sample (EM9-POR) was collected at the original point of release from beneath the affected pipe. The sample was collected from a depth of four (4) feet bgs and analyzed for Table 915-1 parameters. Results indicate no exceedances to Table 915-1 standards above local background levels at this depth. Please see the attached documents for sample locations, depths and analytical results. Results for the referenced background samples may be found in the attached documents and under "Related Forms" for this update.

Hexavalent chromium sample results were below the laboratory Reported Detection Limit in all samples. Consideration of Table 915-1 footnote 9 is requested for hexavalent chromium samples at this spill.

It is posited that natural attenuation has been achieved for this spill. Scout requests closure of this Remediation Project (REM #13512) under Table 915-1.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
