### LOCATION CHANGE COMMENTS

Comments:

Main points of the proposed reclamation plan are outlined below:

- Prairie dog resistant and resilient plant species (initially grass to allow for selective broadleaf herbicide to reduce weed pressure) included in the seed mix
- Increase weight of PLS in mix to offset seed consumption by prairie dogs.
- Discing to prep seedbed while avoiding traditional cross-ripping that may destroy burrows and displace animals to adjacent properties.
- Drill seed to provide the best seed to soil contact.
- Stabilize with hydraulically applied engineered fiber matrix or flexible growth medium to eliminate crimped straw as a food/nesting material source.
- After weed pressure has been satisfactorily managed, a live planting effort is being discussed. Seedlings of resistant forbs and shrubs germinated from local sources can be used to accelerate establishment when broadcast herbicide is no longer needed as a management strategy.
