**RE: Post-Cleaning Vegetation Assessment and Summary – T160-1
Residence Bishop Loss of Control Incident**

BACKGROUND

In response to a well control event on April 6, 2025, CTEH, LLC (CTEH) was engaged by Noble Energy, Inc (Noble) to provide vegetation assessments to determine impact to surrounding properties. During the Bishop Loss of Containment Incident, the T160-1 residence had the potential for impact and CTEH was tasked to perform a visual assessment and develop a remediation protocol.

CTEH performed a visual assessment on April 28, 2025. No hydrocarbons were identified on the vegetation, and no cleaning protocol was recommended.

VEGETATION ASSESSMENT ACTIVITIES

Based on the nature of the incident, CTEH field personnel conducted vegetation assessments at the T158-1 residence to determine potential impact and presence of hydrocarbons. The assessments were performed by staff biologists walking the property, identifying and photo-documenting the vegetation, and searching for signs of hydrocarbons (sheen) with cloth wipes. The assessment has been detailed in the Vegetation Observation Notes (**Attachment A**).

Table 1 summarizes species evaluated on April 28, 2025. Weed species have been excluded from the table.

Table 1 Evaluated Vegetation by Species

Species	Type	# of	
		Individuals	Hydrocarbons Present?
Scotch pine (<i>Pinus sylvestris</i>)	Tree	6	No
silver poplar (<i>Populus alba</i>)	Tree	5	No
box elder (<i>Acer negundo</i>)	Tree	2	No
blue spruce (<i>Picea pungens</i>)	Tree	5	No
chokecherry (<i>Prunus virginiana</i>)	Tree	1	No
pink honeysuckle (<i>Lonicera hispidula</i>)	Shrub	1	No
crack willow (<i>Salix fragilis</i>)	Tree	1	No
common lilac (<i>Syringa vulgaris</i>)	Shrub	1	No

intermediate wheatgrass (<i>Thinopyrum intermedium</i>)	Grass	Lawn	No
---	-------	------	----

Based on the collected assessment data, no incident-related vegetation impacts were observed at the T160-1 residence.

Vegetation Observation Notes

Subject: Vegetation Observation Notes T160-1

Property Review Date: 4.28.2025; Revision date 2.24.2026

Author: N. Cutter, Bat Technician @ EnviroScience Inc; Revision: M. Lockner, Associate Environmental Consultant, CTEH

Previously Observed Wildlife

- a. No wildlife was observed by the property owner. Wildlife reports were submitted by SWCA for each property under separate cover.

1. Observed Vegetation

- a. No signs of hydrocarbons (sheen) were observed on vegetation.
- b. Observed species:

Trees, Large Shrubs, and other Well Established Plants:

- No sheen was observed on woody plants.
- 6x Scotch pine (*Pinus sylvestris*), height 10'-15', 4"-10" dbh. No recommendation.
- 4x silver poplar (*Populus alba*), height 30'-50', multi stem-40" dbh. No recommendation.
- 1x dead silver poplar (*Populus alba*), height 30', 12" dbh. No recommendation.
- 2x box elder (*Acer negundo*), height 12', 8"-12" dbh. No recommendation.
- 5x blue spruce (*Picea pungens*), height 6'-15', 4"-10" dbh. No recommendation.
- 1x chokecherry (*Prunus virginiana*), height 10', 10" dbh. No recommendation.
- 1x pink honeysuckle (*Lonicera hispidula*), multi stem, height 6'. No recommendation.
- 1x crack willow (*Salix fragilis*), height 25', multi stem. No recommendation.
- 1x common lilac (*Syringa vulgaris*), height 12"-18", multi stem. No recommendation.

Small Shrubs and Annual Flowers:

- None observed

Forbs and Grasses:

- None present.

Lawn:

- No sheen was observed on the lawn.
- The lawn consists of intermediate wheatgrass (*Thinopyrum intermedium*) with kochia (*Bassia scoparia*) and flixweed (*Descurainia sophia*) present.

Garden/Food Plots:

- None present.

2. Additional Notes

- None.

3. Photos

Photo 1 - 1 out of 6 Scotch pine (*Pinus sylvestris*), height 10', 4" dbh. No recommendation.

Photo 2 – 1 out of 5 silver poplar (*Populus alba*), multi-stemmed, height 30'. No recommendation.

Photo 3 – 1 out of 2 box elder (*Acer negundo*), height 12', 8" dbh. No recommendation.

Photo 4 – 1 out of 5 blue spruce (*Picea pungens*), height 12', 10" dbh. No recommendation.

Photo 5 – 1 out of 1 pink honeysuckle (*Lonicera hispidula*), multi stem, height 6'. No recommendation.

Photo 6 – 1 out of 1 crack willow (*Salix fragilis*), height 25', multi stem. No recommendation.

Photo 7 – 1 out of 1 common lilac (*Syringa vulgaris*), height 12"-18", multi stem. No recommendation.
