COMMENTS:

A form 4 abatement mitigation plan for this well was approved on 01/13/2021. The abatement system was opened on 05/06/2020. The most recent approval for the continued use of this mitigation was on 05/29/2025. There was not enough fluid or gas to collect a sample during this Form 4 period. No flow rate data has been collected in this form 4 period. On 04/16/2026 a form 17 was completed with a starting pressure of 11 psi and an ending pressure of 1 psi. The well was shut in for over seven days prior to the form 17 being performed. Fluid was present for the entire test. We will continue to use this mitigation strategy for the next 12 months to maintain bradenhead pressures below the 50-psi threshold. Pressure did not exceed the bradenhead action pressure threshold while the system was operating. At the end of the period, Chevron will perform another form 17 test, and a follow-up Form-4 will be submitted to the ECMC.

ECMC Approved: McFarland, Nick Date: 6/2/2026

## CONDITIONS OF APPROVAL, IF ANY LIST

**COA Type**

**Description**

1. Operator will implement measures to control venting, to protect health and safety, and to ensure that vapors and odors from well operations do not constitute a nuisance or hazard to public welfare.
2. Bradenhead gas is not to be vented to the atmosphere; any gas from the Bradenhead will be routed to the specified abatement system. Shut in bradenhead pressure shall not exceed threshold pressure. Operator will implement measures to get an estimate of the gas flow rate and/or volume from the bradenhead.
3. No later than 5/4/27 conduct a bradenhead test, submit a Form 17 within ten days of the test. The well should be shut in for seven days to monitor and collect data to characterize build up pressures prior to conducting the bradenhead test. Within 60 days of conducting the bradenhead test, submit a Form 4 Sundry that summarizes current well condition. The sundry should include details of the future plans, sample analysis interpretation, bradenhead test description, and the flow rate information and pressure data.
4. If a sample has not been collected from surface casing within the last twenty-four months collect bradenhead gas samples for laboratory analysis. Sampling will comply with Operator Guidance - Bradenhead Testing and Reporting Instructions, Appendix A: Liquid and Gas Sampling. Copies of all final laboratory analytical results will be provided to the ECMC within three months of collecting the samples.
5. Due to bradenhead tests that demonstrate liquid flow, on the next bradenhead test form include an estimate on liquid volume and identify the correct fluid flow and type within the table.
