Good afternoon, Steve. Please see the request below for Eric. Log and 6NOI attached for reference. Thank you sir.

"

Thank you sir. Unfortunately, it appears the spot around 130' is not allowing us to circulate. With your approval, we would like to punch another set of holes at about 120' and fill the annulus from 120' to surface, with the previously planned surface plug from 576' to surface inside of 7" casing. Thank you for the consideration.

"

Daniel

Approved as outlined. The plug still needs to be from a minimum of 526' to surface.

Thanks Eric

Good afternoon, Eric. After running a fresh RCBL on the subject well, we would like to request your approval to move the casing punches down to about 345' and circulate to surface during our surface plug. Attached is the new log and the approved 6NOI for reference.
